2. Citations and explanations

- The invention proceeds from DE 32 30 700 C and concerns a sliding bearing shell and method for producing a retaining lug in a sliding bearing shell..

The features of claims 1 and 3 are proposed for the purpose of simplifying production and assembly without detriment to the radially inner sliding surface.

No such sliding bearing shell or method, wherein a retaining lug is produced by deformation of the separating surface, is disclosed in the searched prior art, or rendered obvious thereby. Although the characterising feature of product claim 1 is drafted in terms of a method, the objective subject matter is clearly and unambiguously described.

The subject matter of claim 1 and claim 3 is therefore novel (PCT Article 33(2)) and involves an inventive step (PCT Article 33(3)).

- Claim 2 is dependent on claim 1 and, thus, likewise satisfies the requirements of the PCT in respect of novelty and inventive step.
